

POPULATION AGEING: CHALLENGES BEFORE THE SUSTAINABLE DEVELOPMENT GOALS (SGDs)

Population ageing affect significantly the structure of the population due to fertility declines and rising life expectancy. This points to far reaching socio-political and economic consequences. As such, this paper seeks to provide support policy framework to address the challenges. Data sourced from UN-SGDs especially Global level: 17 Goal, 169 targets and 232 indicators; Regional level: 7 aspirations, 18 goals, 44 priority areas and 174 targets; National level: Nigerian Vision 2030. Result indicates that the elderly, the poor, the disabled, women and rural dwellers are key to the attainment of SGDs. A workable link across national, regional and global indicators with different monitoring tools amidst limited reserves are encouraged.
